To reduce the risk of serious injury or death, read this owner’s manual prior to installing and using this child restraint.

Rear-facing*
1.8 to 22.6 kg (4 to 50 lbs)
43 to 122 cm (17 to 48 in.)

Forward-facing with Harness*
10 to 29.4 kg (22 to 65 lbs)
71 to 124 cm (28 to 49 in.)
At least 2 years old

Booster*
18 to 54.4 kg (40 to 120 lbs)
112 to 145 cm (44 to 57 in.)
At least 4 years old

* See page 4-5 for complete requirements.

⚠️WARNING!

© 2018 Evenflo Company, Inc. 25701468 10/18
More children are killed every year as passengers in car crashes than by any other type of injury.

To reduce the risk of SERIOUS INJURY or DEATH, read this owner’s manual and your vehicle owner’s manual before installing and using this child restraint. Using a child restraint makes a big difference. By properly using this child restraint and following these instructions (and the instructions that accompany your vehicle), you will greatly reduce the risk of serious injury or death to your child from a crash. Do not be misled by the commonly used term “safety seat”; no restraint system can prevent all injuries in all crashes. Many properly restrained adults and children are injured in motor vehicle crashes, including relatively minor crashes. A properly used child restraint is the best way to minimize injuries to your child and to increase the chances for your child’s survival in most crashes.

**FEDERAL STANDARD NO. FMVSS213 - Child Restraint Systems**

This child restraint conforms to all applicable Federal motor vehicle safety standards.

**CANADIAN REGULATORY NOTICE (Model numbers ending in “C.”)***

This child restraint meets all applicable requirements of Canadian Motor Vehicle Safety Standards CMVSS 213 213.1 and 213.2.

**Symbol Legend**

- **Airbag Symbol** – Alerts you to important information about airbag safety.
- **LATCH Symbol** – Alerts you to important information about LATCH safety.
- **Tether Anchor Symbol** – Alerts you to important information about Tether Anchor safety.
- **Aircraft Symbol** – Alerts you to important information about aircraft safety.

**CHILD REQUIREMENTS**

**Warning:** Failure to follow these Child Requirements could result in serious injury or death.

This child restraint is designed for use by children in both **rear-facing** and **forward-facing** orientations. To use this child restraint properly, children **MUST** meet the size and age requirements below. In addition, Evenflo recommends consulting with your child’s physician before allowing your child to transition from **rear-facing** to **forward-facing** use of this child restraint.

The American Academy of Pediatrics (AAP) recommends keeping children **rear-facing** until they reach the maximum height or weight for their child restraint in **rear-facing** orientation. Additionally, some states’ laws require children to be **rear-facing** until age 2. Accordingly, you will see this guidance reflected in the Child Requirements below. Please review any applicable local, state or provincial laws related to child passenger safety before installing and using this child restraint.

**Rear-facing**

- 1.8 to 22.6 kg (4 to 50 lbs)
- 43 to 122 cm (17 to 48 in.) and top of child’s head is at least 2.5 cm (1 in.) or more below the bottom of the headrest adjust lever

**IMPORTANT:** Once your child exceeds any of the size requirements above, they **MUST** use this child restraint in the **forward-facing** orientation, if possible. If your child exceeds any of the size requirements above **and** is less than 2 years old, however, you **MUST** discontinue use of this child restraint.

**Forwards-facing with Harness**

- 10 to 29.4 kg (22 to 65 lbs)
- 71 to 124 cm (28 to 49 in.) and tops of the child’s ears are at or below the top of the child restraint headrest
- At least 2 years old

**IMPORTANT:** Once your child exceeds any of the size requirements for **forward-facing** use above, you **MUST** discontinue use of this child restraint with its internal harness and begin using it in booster mode, if possible. If your child exceeds any of the size requirements for **forward-facing** use above **and** is less than 4 years old, however, you **MUST** discontinue use of this child restraint.

**Booster Mode**

- 18 to 54.4 kg (40 to 120 lbs)
- 112 to 145 cm (44 to 57 in.) and tops of the child’s ears are at or below the top of the booster seat headrest
- At least 4 years old

**IMPORTANT:** Once your child exceeds any of the size requirements above for **booster mode**, you **MUST** discontinue use of this seat. Your child may be ready for use of the vehicle belt system only at this time.
Before using this child restraint for preterm or low birth weight infants, ensure the Child Requirements are met and follow the guidelines in this section.

According to the U.S. National Highway Traffic Safety Administration, a properly installed child restraint reduces the risk of death by over 70 percent for infants involved in crashes. Federal Motor Vehicle Safety Standard (FMVSS) 213 establishes design and dynamic performance requirements for child restraint systems. However, the standard has no minimum weight limit and does not address the special medical needs of preterm or low-birth weight infants. To ensure that preterm and low-birth weight infants are transported safely, the guidelines published by the American Academy of Pediatrics (AAP) in Pediatrics 2009; 123:1424–1429 must be followed.

All children should ride rear-facing in the vehicle as long as possible. Preterm and low-birth weight infants are at additional risk of breathing difficulties and heart problems when placed in a child restraint. Evenflo requires that the evaluation recommended by the AAP be conducted for all infants born earlier than 37 weeks and all newborn infants who weigh less than 5 pounds (2.26 kg) at birth before their first car trip to check for breathing difficulties or heart rate problems when traveling in a rear-facing child restraint.

The AAP recommends that appropriate hospital staff observe your infant in the child restraint for a period of 90 to 120 minutes or the duration of travel, whichever is longer. This period of observation must be performed with the infant properly positioned as described in these instructions and with the child restraint placed at an angle that is approved for use in the vehicle. The hospital staff will check for any breathing difficulties or heart rate problems. Your child’s pediatrician will let you know if there are any special considerations for travel. The number of trips and the duration of time the infant is seated in the child restraint should be minimized. A caregiver should ride in the back seat to monitor the infant during travel.

You can learn more about the AAP’s recommendations for observation of newborns and the guidelines for safe transportation of preterm and low-birth weight infants, as well as other resources for parents and medical professionals, at [https://www.healthychildren.org/english/safety-prevention/on-the-go/Pages/default.aspx](https://www.healthychildren.org/english/safety-prevention/on-the-go/Pages/default.aspx)
To help prevent serious injury or death:

- Failure to follow the Child Usage Requirements for **rear-facing, forward-facing** and **booster mode** for this child restraint could result in serious injury or death. (See page 4 for Child Requirements).
- Failure to follow installation instructions and the instructions and warning labels on product can result in the child striking the vehicle’s interior during a sudden stop or crash. Serious injury or death may result. These instructions and the instructions in your vehicle owner’s manual must be followed carefully. If there is a conflict between the two, the vehicle owner’s manual regarding child restraint installation must be followed.

**WARNING/MISE EN GARDE**

Children have **strangled** in loose or partially buckled harness straps. Fully restrain the child even when carrier is used outside the vehicle.

- **NEVER** leave child unattended.
- **DO NOT** use child restraint if it is damaged, broken, or missing parts.
- **DO NOT** use this restraint if it has been involved in a crash. It must be replaced.

**Location Warnings**

To help prevent serious injury or death:

- **ALWAYS** read and follow exactly the instructions that accompany your vehicle and child restraint.
- According to accident statistics, children are safer when properly restrained in the rear seating positions than in the front seating positions. Generally, the center rear position is safest and should be used if available.
- Some child restraints do not fit all vehicles or all seating locations. There are many thousands of combinations of vehicle makes, models, child restraint configurations, vehicle seat belt designs, and seat cushion shapes. The easiest way to determine whether your child restraint is suitable for a particular seating position is to check for a tight installation. If the child restraint cannot be properly installed, **DO NOT** use the child restraint. Consult vehicle owner’s manual, try a different seating location, or call Evenflo for further assistance.
- **ONLY** use this child restraint on **forward-facing** vehicle seats. **DO NOT** use this restraint with vehicle seats that face the rear or side.

- **ONLY** use this child restraint on vehicle seats with backs that lock into place.

**Vehicle Types which the Restraint System Can Not Be Used:**

- This child restraint is not to be used in vehicles that do not have vehicle seat belts or UAS lower anchorages.
To help prevent serious injury or death:

- When using this restraint rear-facing, **DO NOT** loosen the vehicle seat belt to provide more leg room, as this may keep the child restraint from protecting the child.
- Fold-down armrests could pose a hazard to a rear-facing child in certain types of collisions. Consult your vehicle owner’s manual before installing any rear-facing child restraint in front of a fold-down armrest.
- **NEVER** turn a child restraint forward-facing with a child who weighs less than 10 kg (22 lbs). Crash forces may cause serious injury or death.
- **DO NOT** use the tether strap when the child restraint is in the rear-facing position.
- The headrest on the vehicle seat that the child faces when sitting in the rear-facing mode should be placed in the lowest position. The vehicle seat back that the child faces must be fully padded and free of any hard objects.
- The Anti-rebound Bar is **REQUIRED** for **REAR-FACING** use in Canada.
- **IMPORTANT:** Infants may have difficulty breathing when in an upright seated position. Make sure they recline enough for their head to lie back comfortably and safely. Failure to properly recline the child restraint could increase the child’s risk of serious injury or death.

**Forward-Facing ONLY Warnings**

To help prevent serious injury or death:

- If your child weighs more than 29.4 kg (65 lbs) or their shoulders are above the highest harness level, you **MUST** use child restraint in booster mode.
- **Adjust, or remove, the vehicle headrest in the seat where the child restraint is to be installed,** so that the back of the child restraint rests against the vehicle seat back.
- The headrest on the vehicle seat in front of the child should be put in its lowest position. The vehicle seat back that the child faces must be fully padded and free of any hard objects.
- The Anti-rebound Bar is for use **REAR-FACING ONLY. NEVER** use the Anti-rebound Bar in Forward-facing or Booster Modes.

**Booster Mode ONLY Warnings**

To help prevent serious injury or death:

- **DO NOT** use this booster seat rear-facing.
- **WARNING!** Use **ONLY** the vehicle’s lap **AND** shoulder belt system when restraining the child in this booster seat.
- The shoulder belt **MUST** be threaded through the shoulder belt guide.
- **DO NOT** use this booster seat if the tops of the child’s ears are above the back of the booster seat headrest.
- The shoulder belt **MUST NOT** cross the child’s neck **or** fall off the child’s shoulder. If you cannot adjust the shoulder belt to properly lay midway between the child’s shoulder and neck **AND** at or above the shoulder, try another seating location or do not use the booster seat.
- The Anti-rebound Bar is for use **REAR-FACING ONLY. NEVER** use the Anti-rebound Bar in Forward-facing or Booster Modes.
To help prevent serious injury or death:

- **ALWAYS** read your vehicle owner's manual to determine what vehicle belts and retractors are used in your vehicle belt. The vehicle belt **MUST** lock and **MUST NOT** loosen after the seat belt is tightened.

- **DO NOT** use this child restraint if it moves more than 2.5 cm (1 in.) side to side or front to back at either the rear-facing or forward-facing belt path on the child restraint. Serious injury or death may result from poor installation. If you cannot tightly secure the child restraint, try again or move it to another location.

- **DO NOT** use this child restraint in a seating position with door-mounted seat belts.

- **DO NOT** use this child restraint in a vehicle with seat belts that automatically move along the vehicle frame when the door is opened.

- **DO NOT** use this child restraint in a vehicle equipped with lap belts that only lock during a sudden stop or crash (emergency locking retractor – ELR). You must use a seating location with a locking seat belt. Check your vehicle owner’s manual to see if you have lap belts with ELRs.

- **DO NOT** use on vehicle seats when both portions of the vehicle belts are positioned forward of the seat crease.

---

**LOCKING CLIP USE:**

If your vehicle was built **prior to model year 1996**, and has a lap/shoulder belt that is equipped with an emergency locking retractor (ELR) AND sliding latch plate, you **MUST** use a Locking Clip. Check your vehicle owner’s manual to identify which vehicle belt system is in your vehicle.

If your vehicle is **model year 1996 or newer**, it likely has a vehicle belt system that can be locked when tightened, and will not require use of a Locking Clip. **Consult your vehicle owner’s manual before installing a locking clip.** If your vehicle requires a Locking Clip, please call ParentLink at 1-800-233-5921 (U.S.) or 1-937-773-3971 (Canada), or 01-800-706-12-00 (Mexico) to obtain a Locking Clip and instructions on how to install and use it. Remove Locking Clip from vehicle seat belt when not used with a child restraint, or the vehicle seat belt will not properly restrain an adult or child. Serious injury could occur.
What is LATCH?

**LATCH** is an acronym for *(Lower Anchors and Tethers for CHildren)* and refers to a pair of fixed Lower Anchors (or bars) and a Top Tether anchor that are built into your vehicle, in vehicles built after September 1, 2002.

The lower LATCH anchors are located in the crease, or bight, between the vehicle seat back and seat cushion, and if not visible, will typically be indicated by a symbol. Top tether anchors are located in various places behind the rear vehicle seat.

**Center installation in a non-standard LATCH position:**

Center installation of this child restraint is permitted using inner Lower Anchor Bars from the outside seating positions if (1) your vehicle manual allows such installation; and (2) the inner Lower Anchor Bars from the outside seating positions are 28-51 cm (11-20 in.) apart.

**LATCH** typically offers an easier and more consistent installation. However, this child restraint can be safely installed using either **LATCH** or vehicle belts and meets the requirements of Federal Safety Standard FMVSS 213 with either installation method. Either method is safe for your child when installed correctly. When using either method, it is best practice to **ALWAYS** use tether when installing in the forward-facing position.

**DO NOT** install this child restraint with **LATCH** and the vehicle’s seat belts at the same time. Your vehicle owner’s manual may refer to this system as **ISOFIX**, **Universal Anchorage System (UAS)**, or **Lower Universal Anchorage System**.

The **LATCH** system is intended to be used **ONLY** as described in these instructions. Serious injury or death may result from misuse. Refer to your vehicle Owner’s Manual for lower anchor bar positions in your vehicle.
To help prevent serious injury or death:

- **DO NOT** use the lower anchors of the child restraint anchorage system (*LATCH* system) to attach this child restraint when restraining a child weighing more than 18 kg (40 lbs) with the internal harnesses of the child restraint. **ONLY USE VEHICLE BELT INSTALLATION.**
- In addition to these instructions, read and follow your vehicle owner’s manual regarding installation of the child restraint and *LATCH*. If there is a discrepancy, follow your vehicle owner’s manual.
- **ONLY** use for securing child restraint to vehicle lower anchor bars.
- **NEVER** attach two lower anchor connectors to one vehicle lower anchor bar.
- **NEVER** use the vehicle seat belts when using the lower anchor connector assembly. Using both together can cause slack in a sudden stop or crash.
- To avoid strangulation, you must store the unused *LATCH* straps, with all slack removed, in the storage areas on the sides of your seat. Roll or fold the excess *LATCH* strap and secure with a rubber band to prevent serious injury to vehicle occupants.
- **ALWAYS** be sure that the lower anchor connectors are attached to the vehicle lower anchor bars by pulling hard on the lower anchor connectors. If they are not attached, the lower anchor connector assembly will not secure your child restraint. Serious injury or death may result.
- **DO NOT** use this child restraint if it moves more than 2.5 cm (1 in.) side to side or front to back at either the rear-facing or forward-facing belt path on the child restraint. Serious injury or death may result from poor installation. If you cannot tightly secure the child restraint, try again or move it to another location.

- **DO NOT** use the cup holder to store cans or hard cups. **DO NOT** place any cups that contain hot liquids in the cup holder.
- **DO NOT** attach additional padding, toys, or other devices not made by Evenflo or described in these instructions for the child restraint. Items not tested with the child restraint could injure the child. Additional pads or pillows may interfere with the function of the harness system, or cause breathing problems if the child’s head falls forward, increasing the risk of serious injury or death.
- In hot or sunny weather, **ALWAYS** check the areas of the child restraint that may contact your child (e.g., buckle, buckle tongues, etc.) for hot areas before placing him/her into the child restraint. The child could be burned. Cover the child restraint with a light colored blanket when you leave the vehicle.
- In cold weather, **DO NOT** dress the child in bulky clothing like snowsuits if the child is riding in a child restraint. Bulky coats/snowsuits make it difficult to properly tighten the harness to the child, which may allow the child to be ejected from the restraint during a crash. If necessary, place a blanket over the harnessed child without interfering with the child restraint harness system.
- Failure to follow installation instructions could result in serious injury or death. These instructions and the instructions in your vehicle owner’s manual must be followed carefully. If there is a conflict between the two, the vehicle owner’s manual regarding child restraint installation must be followed.
**Safe Practices**

- **Everyone rides buckled up or the vehicle does not go.** Make no exceptions for adults or children. If someone unbuckles, stop the vehicle. Being firm and consistent from the start will mean fewer discipline problems as children get older. An unrestrained person can be thrown into and injure other passengers.
- Many safety advocates and healthcare professionals recommend that children ride rear-facing for as long as possible. See limitations recommended on rear-facing use on page 4.
- **NEVER** try to tend to a crying baby’s needs while driving. NEVER take a baby out of a child restraint for comforting while the vehicle is moving.
- **DO NOT** allow a child in a vehicle to have objects such as lollipops or ice cream on a stick. The object can injure the child if the vehicle swerves or hits a bump.
- **DO NOT** feed an infant who is riding in a child restraint.
- Put sharp or heavy items in the trunk. Anything loose can be deadly in a crash.

**For Recall Information for U.S. Customers**

- Child restraints could be recalled for safety reasons. You must register this restraint to be reached in a recall. Send your name, address, and the restraint’s model number and manufacturing date to:
  
  **Evenflo Company, Inc.,**  
  **1801 Commerce Dr.,**  
  **Piqua, OH 45356**  
  or call 1-800-233-5921.  
  or register online at:  
  **www.evenflo.com/registercarseat**

- For recall information, call the U.S. Government’s Vehicle Safety Hotline at 1-888-327-4236 (TTY:1-800-424-9153), or go to:  
  **http://www.NHTSA.gov**

**Public Notice for Canadian Customers**

- Child restraints could be recalled for safety reasons. You must register this restraint to be reached in a recall. Send your name, address, and the restraint’s model number and manufacturing date to:

  **Evenflo Company, Inc.,**  
  **1801 Commerce Dr.,**  
  **Piqua, OH 45356**  
  or call 1-937-773-3971.  
  or register online at:  
  **www.evenflo.com/registercarseatcanada**

- For public notice information, call Transport Canada at 1-800-333-0510 (1-613-993-9851 in Ottawa region).

**Motor Vehicle/Aircraft Usage**

When used with the internal harness and properly installed pursuant to these instructions, this restraint is certified for use only in passenger and multi-purpose passenger motor vehicles, buses, and trucks equipped with either lap belts only or lap/shoulder belt systems and in aircraft.

Refer to pages 64 to 67 for instructions on installing your child restraint in aircraft.

When used **WITHOUT** the internal harness system (in booster mode) and properly installed pursuant to these instructions, this restraint is certified for use only in passenger and multi-purpose passenger motor vehicles, buses, and trucks equipped with lap/shoulder belt systems only. In booster mode, this restraint is **NOT** certified for aircraft use. A belt-positioning booster requires the use of a lap/shoulder belt system, which is not available in aircraft.
Child Restraint Features

**Front**
1. Adjustable Headrest
2. Harness Covers*
3. Harness Storage Compartment (behind seat pad)
4. Harness Straps
5. Harness Release Button (under flap)
6. Harness Adjust Strap
7. Recline Handle (under front edge of seat)
8. Headrest Adjust Lever
9. Instruction Manual Storage (behind headrest pad)
10. Seat Pad
11. Shoulder Belt Guide (see p.52)
12. Chest Clip
13. Body Pillow
14. Buckle
15. Crotch Strap
16. Cup Holder
17. Recline Position Indicators
18. Level Indicator
19. Tether Strap and Hook (Shown fastened to storage clip)
20. Lower Anchor (UAS) Connector Assembly
   (styles may vary, see page 24)
21. Base
22. Lower Anchor (UAS) Storage Compartment
   (both sides of the seat)
23. Anti-rebound Bar (Canada Only)

**Back**

*Not all features are available on all models. Styles may vary.*
Child Restraint Features (cont.)

Cupholder

**WARNING**

- **USE** the cup holder when the child restraint is in the forward-facing position only.
- **DO NOT** use the cup holder to store cans or hard cups.
- **DO NOT** place any cups that contain hot liquids in the cup holder.
- **DO NOT** attach any other items to this child restraint unless it has been certified for use with this specific child restraint.

To install the cup holder liners, insert into cupholder area until it snaps into place.

**Note:** Cupholder liners may be removed for cleaning. Dishwasher safe (top rack only).

Harness Covers (only on certain models)

Install Harness Covers above Chest Clip. Harness covers are optional for added comfort. Wrap Harness Covers around harness straps and attach Velcro strips as shown.

Always check that the harness covers **DO NOT** bunch up when tightening the harness.

Body Pillow

**Note:** The body pillow is for **REAR-FACING** use only. The optional Body Pillow, when placed in the restraint, as shown, helps support your child.

When the headrest is in the lower positions, make sure the backrest flap is in front of the buckle as shown.

Head Pillow

The head pillow is for **REAR-FACING** only use. The head pillow helps support your child's head.

**IMPORTANT:** Infants may have difficulty breathing when in an upright seated position. Using additional padding or pillows other than the Head Pillow behind the infant’s head or failing to properly recline the child restraint could increase the child’s risk of serious injury or death.
**Child Restraint Features (cont.)**

---

### Lower Anchor Connector (UAS)

#### Which Type of Lower Anchor Connector Is on Your Child Restraint?

Your child restraint will have one of the two types of Lower Anchor Connectors shown below. Follow the instructions on the following pages to properly install the Lower Anchor Connector Assembly on your child restraint.

**EasyClick™ Lower anchor (UAS)**
*Not available on all models.*

**Quick Connector™ Lower anchor (UAS)**
*Not available on all models.*

---

### Removing the Lower Anchor (UAS) Connector

To remove the lower anchor (UAS) from its storage compartment (p. 63), pull the red Release Strap.

---

### Storing Lower Anchor (UAS) Straps

To store the lower anchor (UAS) in its storage compartment, insert into the storage compartment **UNTIL** it clicks into compartment as shown below:

**REAR-FACING LOWER ANCHOR (UAS) STORAGE COMPARTMENT**

**FORWARD-FACING LOWER ANCHOR (UAS) STORAGE COMPARTMENT**

---

*Child Restraint Features (cont.)*
Using the Child Restraint
Rear-facing

⚠️ WARNING
When using this restraint rear-facing, **DO NOT** loosen the vehicle seat belt to provide more leg room as this may keep the child restraint from protecting your child.

**Child Requirements:**
- **Weight:** 1.8 to 22.6 kg (4 to 50 lbs)
- **Height:** 43 to 122 cm (17 to 48 in.) and top of child’s head is at least 2.5 cm (1 in.) or more below the bottom of the headrest adjust lever

**IMPORTANT:** Once your child exceeds any of the size requirements above, they **MUST** use this child restraint in the forward-facing orientation, if possible. If your child **exceeds** any of the size requirements above and is less than 2 years old, however, you **MUST** discontinue use of this child restraint.

**WARNING**
The Anti-rebound Bar is for use **REAR-FACING ONLY**. **NEVER** use the Anti-rebound Bar in Forward-facing or Booster Modes.

**anti-rebound bar is REQUIRED for rear-facing use in Canada.**

1. Anti-rebound Bar

Place Anti-rebound Bar through slots in seat cover into metal tubing in seat shell.
Press the locking buttons and insert Anti-rebound Bar until both ends click into place. **Note:** Pull the Anti-rebound Bar to make sure it is locked securely.

2. Anti-rebound Bar

To remove the Anti-rebound Bar, press both locking buttons and withdraw the Bar from the seat.
**Rear-facing Installation with Lower Anchor (UAS) Connectors**

**Moving Lower Anchor Connector Assembly to Rear-facing Belt path**

To access the Lower Anchor Connector Assembly, you will first need to:
- Loosen internal harness straps (p. 62);
- Remove Lower Anchor Connectors (p. 24);
- Lift pad off front edge of child restraint. (p. 70).

*(illustrations below show pad off for clarity only)*

To install this child restraint properly in the rear-facing position, the Lower Anchor Connector Assembly **MUST** be in the rear-facing belt path.

*Your car seat comes with the Lower Anchor Connector assembly installed in the rear-facing belt path.*

If the Lower Anchor strap is in the forward-facing belt path, follow these steps:
- Lift the seat pad off of the front edge of the child restraint.
- Pull the Lower Anchor strap to the center of the seat.
- Route the Lower Anchor strap out through the rear-facing belt path.

**IMPORTANT:** If crotch buckle is in rear slot, place lower anchor (UAS) strap in front of buckle. If crotch buckle in front slot, place lower anchor (UAS) strap behind buckle.

**IMPORTANT:** Make sure the Lower Anchor Connector strap does not interfere with the internal harness straps.

**Note:** After moving the Lower Anchor Connector strap, make sure the strap lies flat against the seat shell. You may have to twist the strap to achieve this.

**Rear-facing Installation with Lower Anchor (UAS) Connectors (cont.)**

**DO NOT install by this method for a child weighing more than 18kg (40 lbs).**

**ALWAYS store the tether strap (p. 63). Never use tether strap when child restraint seat is rear-facing.**

**Infants who weigh less than 10kg (22 lb) **MUST** always be rear-facing.**

1. Remove Lower Anchor Connectors from sides of the seat (p. 24). **CHECK** Lower Anchor strap is in rear-facing belt path (p. 28).

2. **IMPORTANT:** Infants may have difficulty breathing when in an upright seated position. Make sure they recline enough for their head to lie back comfortably and safely. Failure to properly recline the child restraint could increase the child’s risk of serious injury or death.

   Lift up on the recline handle as shown. Adjust the seat recline to **REAR-FACING Positions #1, #2, or #3 ONLY** (see below). Place child restraint **rear-facing** on approved vehicle seat. Always make sure the bottom of the child restraint sits flat on the vehicle seat.

3. **Make sure vehicle is on level ground.**
   **Make sure that the seat is positioned so that the leveling ball is in the green zone for rear-facing use.**
4. Ensure child restraint is secure.
   - To secure a child restraint that has EasyClick™ connectors, go to Step 4a.
   - To secure a child restraint that has Quick Connectors, go to Step 4b.

4a. Lift pad off front edge of seat as shown.
   Attach lower anchor / UAS connectors to the vehicle lower anchor bars until they lock onto the bars on both sides of the seat.

   
   \[\text{CLICK!}\]

   **IMPORTANT:** Make sure both lower anchor connectors are facing upward and the straps are not twisted.

   EasyClick™

   Correct
   
   Incorrect

   Tighten the strap by moving the handle back and forth on the lower anchor connector as shown until the seat is tight. Fold handle up after tightening.

   
   \[\text{CLICK!}\]

4b. Lift pad off front edge of seat as shown.
   Attach lower anchor / UAS connectors to the vehicle lower anchor bars until they lock onto the bars on both sides of the seat.
   Using your full weight, push the child restraint firmly into the vehicle seat while pulling up on the Lower Anchor Strap to tighten, as shown.

   \[\text{CLICK!}\]

   **Quick Connector™**

   Correct
   
   Incorrect

   **IMPORTANT:** Make sure both lower anchor connectors are facing upward and the straps are not twisted.

5. **Test for tightness.** If you can move the child restraint more than 2.5 cm (1 in.) side to side or front to back at the rear-facing belt path, the lower anchor connector assembly strap is not tight enough.
   You will need to try again, find another location for your child restraint, or install with the vehicle seat belt (p. 33).

   Re-attach the seat pad.
6. Re-check the level indicator. Ball should be between the green zone for rear-facing.

7. Note: In some vehicles, in the most reclined position, it may be necessary to place a tightly rolled towel or small blanket beneath the front edge of the child restraint to provide enough recline so that the leveling ball is in the green zone for rear-facing use.

8. To remove the lower anchor connector assembly strap, pull red release strap. Remove the other strap on the other side of the seat from the vehicle anchor.

IMPORTANT:
- Before installing this child restraint rear-facing with the vehicle seat belt, you MUST move the Lower Anchor Connector Assembly (UAS) to the forward-facing belt path so that it does not interfere with the vehicle seat belt. Refer to page 39 for instructions on moving the Lower Anchor Connector Assembly (UAS) to the forward-facing belt path.
- Check your vehicle owner’s manual to determine how to lock your seat belt for child restraint installation. The seat belt must be locked to properly secure the child restraint.
- DO NOT use the Tether Strap when the child restraint is in the rear-facing position. Store tether, p. 63.

1. Re-route the lower anchor connector strap through the forward-facing belt path p. 39. Store the lower anchor connector (UAS) in the forward-facing belt path as shown.

2. IMPORTANT: Infants may have difficulty breathing when in an upright seated position. Make sure they recline enough for their head to lie back comfortably and safely. Failure to properly recline the child restraint could increase the child’s risk of serious injury or death.

Lift up on the recline handle as shown. Adjust the seat recline to REAR-FACING Recline Positions #1, #2, or #3 ONLY. Place child restraint rear-facing on approved vehicle seat.

Always make sure the bottom of the child restraint sits flat on the vehicle seat.
**Rear-facing Installation with Vehicle Seat Belts (cont.)**

3. Make sure vehicle is on level ground.
   Make sure the seat is positioned so that the leveling ball is in the green zone for rear-facing use.

4. **Ensure child restraint is secure.**
   - To secure a child restraint with Lap Belt, go to Step 4a.
   - To secure a child restraint that has Lap/Shoulder Belt go to Step 4b.

4a. **Rear-facing Installation with Vehicle Seat Belts - Lap Belt**

   - Pull the seat pad off of the front of the child restraint. Route the lap belt through the rear-facing belt path and continue through the opposite opening of the child restraint. Fasten the buckle.
   - **IMPORTANT:** If crotch buckle is in **rear slot**, place vehicle belt in **front** of buckle. If crotch buckle is in **front slot**, place vehicle belt **behind** buckle. Make sure the belt lies flat without twisting, as shown.

   - **The vehicle seat belt must be as tight as possible.**
     Using your full weight, push the child restraint firmly into the vehicle seat as you tighten the vehicle **seat belt**, as shown. Reconnect the seat pad to the front of the child restraint.

   - **Check your work.**
     Make certain the belt is tight and locked. If you can move the child restraint more than 2.5 cm (1 in.) side to side or front to back at the rear-facing belt path, the vehicle belt is not tight enough.
     **Re-check recline level** (p.34)
     If you have not tightly secured the child restraint, try again, move it to another location, or install with the lower anchor connector assembly (p. 30).

5. To remove seat, unbuckle vehicle seat belt.
Rear-facing Installation with Vehicle Seat Belts - Lap/Shoulder Belt

4b. Pull the seat pad off of the front of the child restraint. Route the lap/shoulder belt through the rear-facing belt path and continue through the opposite opening of the child restraint. Fasten the buckle.

**IMPORTANT:** If crotch buckle is in rear slot, place vehicle belt in front of buckle. If crotch buckle is in front slot, place vehicle belt behind buckle. Make sure the belt lies flat without twisting, as shown.

The vehicle seat belt must be as tight as possible. Using your full weight, push the child restraint firmly into the vehicle seat as you tighten the vehicle seat belt, as shown. Reconnect the seat pad to the front of the child restraint.

Check your work. Make certain the belt is tight and locked. If you can move the child restraint more than 2.5 cm (1 in.) side to side or front to back at the rear-facing belt path, the vehicle belt is not tight enough.

Re-check recline level (p. 34)

If you have not tightly secured the child restraint, try again, move it to another location, install a locking clip (p. 13) or install with the lower anchor connector assembly (p. 30).

5. To remove seat, unbuckle vehicle seat belt.
**Using the Child Restraint**

**Forward-facing with Harness**

**Child Requirements:**
- **Weight:** 10 to 29.4 kg (22 to 65 lbs)
- **Height:** 71 to 124 cm (28 to 49 in.) and tops of child’s ears are at or below the top of the child restraint headrest.
- **Age:** At least 2 years old

**WARNING**

NEVER use the Anti-rebound Bar in Forward-facing Mode.

**IMPORTANT:** When installing this child restraint with Lower Anchor (UAS) Connectors or the vehicle seat belt, always use the top anchorage strap (tether), if a tether anchor is available.

**DO NOT install by this method for a child weighing more than 18kg (40lbs).**

**IMPORTANT:** Once your child exceeds any of the size requirements for forward-facing with harness use above, you MUST discontinue use of this child restraint with its internal harness and begin using it in booster mode.

---

**Forward-facing Installation with Lower Anchor (UAS) Connectors**

**Moving Lower Anchor Connector Assembly to Forward-facing Belt path**

To access the Lower Anchor Connector Assembly, you will first need to:
- Loosen internal harness straps (p. 62);
- Remove Lower Anchor Connectors (p. 24);
- Unfasten snaps on headrest and back pad. (p. 57).

*Illustrations below show pad off for clarity only*

To install this child restraint properly in the forward-facing position, the Lower Anchor Connector (UAS) Assembly MUST be in the forward-facing belt path.

If the Lower Anchor Connector strap is in the rear-facing belt path, follow these steps:
- Raise the headrest to its highest level (p. 58).
- Unfasten snaps on headrest and back pad. (p. 57).
- Pull the Lower Anchor Connector strap to the center of the seat.
- Route the Lower Anchor Connector strap out through the forward-facing belt path.
- Re-attach the seat pad.

**IMPORTANT:** Make sure the Lower Anchor Connector strap does not interfere with the internal harness straps.

**Note:** After moving the Lower Anchor Connector strap, make sure the strap lies flat against the seat shell. You may have to twist the strap to achieve this.
Forward-facing Installation with Lower Anchor (UAS) Connectors

DO NOT install by this method for a child weighing more than 18kg (40lbs).

Infants who weigh less than 10kg (22lb) MUST always be rear-facing.

ALWAYS USE TETHER STRAP, if a Tether Anchor is available. If not available, ALWAYS store the Tether Strap (p. 63).

1. Remove Lower Anchor Connectors from sides of the seat (p. 24). MAKE SURE Lower Anchor strap is in forward-facing belt path (p. 39).

   Lift up on the recline handle as shown and adjust the seat recline to FORWARD-FACING Positions #4 or #5 ONLY (see below).

2. Place child restraint in your vehicle forward-facing, as shown. Always make sure the bottom of the child restraint sits flat on the vehicle seat. Unhook tether strap from the rear of the child restraint and place tether hook with red adjuster (p. 63) over back of vehicle seat. Make sure that the seat is positioned so that the leveling ball is in the blue zone for forward-facing use.

3. Attach lower anchor (UAS) connectors to the vehicle lower anchor bars until they lock onto the bars on both sides of the seat.

4. Ensure child restraint is secure.
   - To secure a child restraint that has EasyClick™ connectors, go to Step 4a.
   - To secure a child restraint that has Quick Connectors, go to Step 4b.

4a. Attach lower anchor (UAS) connectors to the vehicle lower anchor bars until they lock onto the bars on both sides of the seat.

   IMPORTANT: Make sure both lower anchor connectors are facing upward and the straps are not twisted.

   Correct

   Incorrect

Tighten the strap by moving the handle back and forth on the lower anchor connector as shown until the seat is tight. Fold handle up after tightening.

4b. To secure a child restraint that has Quick Connectors, go to Step 4b.
4b. Attach lower anchor / UAS connectors to the vehicle lower anchor bars until they lock onto the bars on both sides of the seat.

Using your full weight, push the child restraint firmly into the vehicle seat while pulling up on the Lower Anchor Strap to tighten and remove all slack, as shown.

CLICK!

**Quick Connector™**

**Correct**

**Incorrect**

**IMPORTANT:** Make sure both lower anchor connectors are facing upward and the straps are not twisted.

5. **Test for tightness.** If you can move the child restraint more than 2.5 cm (1 in.) side to side or front to back at the rear-facing belt path, the lower anchor connector assembly strap is not tight enough. You will need to try again, find another location for your child restraint, or install with the vehicle seat belt (p. 45).

Re-attach the seat pad.

6. Connect the tether hook to the vehicle tether anchor behind the vehicle seat, as shown. (Please consult your vehicle owner’s manual, as tether anchor locations may vary.) Pull the strap and tighten the tether securely.

**WARNING**

- Failure to follow these instructions could result in serious injury to your child or other vehicle occupants.
- The tether strap is for **forward-facing use only**.
- To avoid a strangulation hazard, you **MUST** tightly roll or fold excess tether strap and secure with the strap/rubber band.
- Attach the tether hook to the storage clip on the seat when not in use (**rear-facing mode only**). This will keep an unused tether or tether hook from hitting someone during a crash.

After adjusting the tether strap, you may have excess strap; **DO NOT** cut it off. If you do, it may not be long enough to use in another vehicle. Instead, tightly roll up the excess tether strap and place the rubber band around the bundle.

**Note:** Refer to your vehicle owner’s manual for the location of the tether anchor in your vehicle. Older vehicles may not come equipped with tether anchor hardware. Check with your vehicle dealer.

- **The Tether Strap MUST** be used when installing this child restraint forward-facing with a vehicle seat belt if a Tether Anchor is available.
- **If your Tether Strap is too short to reach from your child restraint to your Tether Anchor,** you will need a Tether Extender. Please call Parentlink at 1-800-233-5921 (U.S.) or 1-937-773-3971 (Canada), or 01-800-706-12-00 (Mexico).
7. Re-check the level indicator. Ball should be between the blue zone for forward-facing.

8. To remove the lower anchor connector assembly strap, pull red release strap. Remove the other strap on the other side of the seat from the vehicle anchor.

---

**Important:**
- Before installing this child restraint forward-facing with the vehicle seat belt, you MUST move the lower anchor connector (UAS) assembly to the rear-facing belt path so that it does not interfere with the vehicle seat belt. Refer to page 27 for instructions on moving the lower anchor connector assembly (UAS) to the forward-facing belt path.
- Check your vehicle owner’s manual to determine how to lock your seat belt for child restraint installation. The seat belt must be locked to properly secure the child restraint.
- **Always use tether strap**, if a Tether Anchor is available. If not available, **Always store the Tether Strap** (p. 63).

1. Re-route the lower anchor connector strap through the rear-facing belt path (p. 27). Store the lower anchor connector (UAS) in the rear-facing belt path as shown.

2. Lift up on the recline lever as shown and adjust the seat recline to **Forward-facing recline positions #4 or #5 only.**
3. Place child restraint in your vehicle **forward-facing**, as shown. Always make sure the bottom of the child restraint sits flat on the vehicle seat.

Unhook tether strap from the rear of the child restraint and place tether hook with **red adjuster** (p. 63) over back of vehicle seat.

Make sure that the seat is positioned so that the leveling ball is in the blue zone for forward-facing use.

4. **Ensure child restraint is secure.**
   - To secure a child restraint with Lap Belt, go to Step 4a.
   - To secure a child restraint that has Lap/Shoulder Belt go to Step 4b.

4a. Raise headrest to its highest position (p. 58), then lift back pad away from child restraint for easier access. Route the lap belt through the forward-facing belt path and continue through the opposite opening of the child restraint. Fasten the buckle.

**IMPORTANT:** Make sure the lap belt lies flat without twisting.

*The vehicle seat belt must be as tight as possible.*

Using your full weight, push the child restraint firmly into the vehicle seat as you tighten the vehicle **seat belt**, as shown. Lower the back pad.
4b.

Raise headrest to its highest position (p. 58), then lift back pad away from child restraint for easier access. Route the lap/shoulder belt through the forward-facing belt path and continue through the opposite opening of the child restraint. Fasten the buckle.

**IMPORTANT:** Make sure the lap/shoulder belt lies flat without twisting.

The vehicle seat belt must be as tight as possible. Using your full weight, push the child restraint firmly into the vehicle seat as you tighten the vehicle seat belt, as shown. Lower the back pad.

5.

**Check your work.**

Pull on the belt to make sure it's tight and locked. If you can move the child restraint more than 2.5 cm (1 in.) side to side or front to back at the forward-facing belt path, the vehicle belt is not tight enough.

If you have not tightly secured the child restraint, try again, move it to another location, or install with the lower anchor connector assembly (p. 40).

Continue with Step 6 to install tether strap.

6.

Connect the tether hook to the vehicle tether anchor behind the vehicle seat, as shown. (Please consult your vehicle owner’s manual, as tether anchor locations may vary.) Pull the strap and tighten the tether securely.

**WARNING**

- Failure to follow these instructions could result in serious injury to your child or other vehicle occupants.
- The tether strap is for **forward-facing use only**.
- To avoid a strangulation hazard, you **MUST** tightly roll or fold excess tether strap and secure with the strap/rubber band.
- Attach the tether hook to the storage clip on the seat when not in use (rear-facing mode only). This will keep an unused tether or tether hook from hitting someone during a crash.

After adjusting the tether strap, you may have excess strap; **DO NOT** cut it off. If you do, it may not be long enough to use in another vehicle. Instead, tightly roll up the excess tether strap and place the rubber band around the bundle.

**Note:** Refer to your vehicle owner’s manual for the location of the tether anchor in your vehicle. Older vehicles may not come equipped with tether anchor hardware. Check with your vehicle dealer.

- The Tether Strap **MUST** be used when installing this child restraint forward-facing with a vehicle seat belt if a Tether Anchor is available.
- If your Tether Strap is too short to reach from your child restraint to your Tether Anchor, you will need a Tether Extender. Please call Parentlink at 1-800-233-5921 (U.S.) or 1-937-773-3971 (Canada), or 01-800-706-12-00 (Mexico).
7. Re-check the level indicator. Ball should be between the blue zone for forward-facing.

8. To remove the seat, unbuckle the vehicle belt.

1. **Secure child restraint to the vehicle seat.**
   - Child restraint is in Position #4 or #5 (p. 58).
   - Anti-rebound Bar has been removed for forward-facing use. (p. 28).
   - Child restraint base sits flat on vehicle seat.
   - To properly secure this child restraint it **MUST NOT** move more than 2.5 cm (1 in.) from side to side or front to back at the forward-facing belt path (pages 42 and 47-48).
   - Install with Lower Anchor connector Assembly (p. 39) or vehicle seat belt (p. 45).
   - Tether strap is securely attached and tightened (p. 43 or 49).
   - Install locking clip, if necessary (p. 13).

2. **Set the child in the child restraint.**
   - The top of the child’s ears are at or below the top of the child restraint headrest.
   - The child’s back and bottom are flat against the back and bottom surfaces of the child restraint.

3. **Fasten the buckle.** Refer to page 61.
   - Buckle tongues are fully engaged (p. 61).

4. **Make necessary adjustments.**
   - Crotch strap should be snug against the child (p. 61).
   - Harness straps **MUST** be snug against the child’s shoulders, with no slack (p. 61).
   - Harness straps **MUST** start at or above shoulder height (p. 38).
   - The leveling ball is in the blue zone for forward-facing use (pages 44 and 50).

5. **Position and connect chest clip.**
   - Chest clip **MUST** be at armpit level (p. 61).
Using the Child Restraint in Booster Mode

Child Requirements
- **Weight:** 18 to 54.4 kg (40 to 120 lbs)
- **Height:** 112 to 145 cm (44 to 57 in.) and tops of the child’s ears are below the top of the child restraint headrest.
- **Age:** At least 4 years old

**WARNING**

*NEVER* use the Anti-rebound Bar in Booster Mode.

The shoulder belt **MUST** pass through shoulder belt guide and the belt guide should be **even with or just above** the shoulders.

The lap belt is stretched low and snug across the child’s hips, within the lower belt guides, and fastened into the buckle.

- Never use a booster with only a lap belt.

**IMPORTANT:** Once your child exceeds any of the size requirements above for **booster mode**, you **MUST** discontinue use of this seat. Your child may be ready for use of the vehicle belt system only at this time.

When to Put Your Child in a Booster Seat

Booster seats raise the child up and help to position the vehicle lap and shoulder belt correctly. When the child is properly restrained in a booster seat, his/her risk of injury in all types of crashes is reduced, as the lap and shoulder belt provides excellent restraint of both the upper and lower torsos.

It is important for the child to sit properly within the vehicle seat belts. When the vehicle belt is buckled, the lap belt should be low on the hips, just touching the thighs, and the shoulder belt should lie across the middle of the shoulder. If the child leans out or moves the belt behind the back or places it under the arm, it will not provide the intended restraint.

There are a number of things to consider when deciding whether a child is ready to sit in a booster seat, including: the weight and height ratings on his/her current child seat, the child’s own weight and height, his/her maturity, and the seating positions available in your vehicle.

**How is a booster seat used?**

Using a booster seat is very similar to buckling yourself into the vehicle:
- Read the instruction manuals for both the booster seat and the vehicle before you start.
- Put the booster in the back seat in a location with a lap and shoulder belt. **Never use a booster with only a lap belt**, as this could cause serious injuries.
- After the child is in the booster, pull the lap and shoulder belt across him/her and buckle it.
- Check that the shoulder belt lies across the middle of the shoulder and that the lap belt is low on the hips, just touching the thighs.
- Make sure base is level with ground in **RECLINE POSITION 5 - ONLY**.
How can you tell if a child is ready to transition to a booster seat?
You should consider using a booster seat if the following conditions apply:

- The child is mature enough to sit in the booster seat and not put the belts under his/her arm or behind his/her back.
- The child is approaching the weight or height limit of the child restraint he/she is currently using. (Even children who have not outgrown their toddler seat can benefit from the use of a booster seat, if it is used properly.)
- If you have a vehicle that does not have a tether anchorage but has lap/shoulder belts available in the back seat, a booster seat may provide better protection than an internal harness seat without the tether.

1. Convert child restraint to booster seat.
   - See “Converting Seat into Booster Mode,” (p. 56)
   - Anti-rebound Bar has been removed for Booster use. (p. 28)

2. Secure booster seat to the vehicle seat.
   Make sure the seat base is level with ground (p. 52). Make sure the bottom and back of the booster seat are touching vehicle seat and back.
   **IMPORTANT:** You may use the Tether Strap and Lower Anchor Connectors to secure this booster seat to the vehicle seat as long as the position of the booster seat in the vehicle and/or the resulting fit of the vehicle seat belt over the child are not affected.

3. Place the child in the booster seat.
   - Make sure the booster seat is securely locked into Recline Position #5 (p. 58).
   - Make sure the child’s back and bottom are flat against the back and bottom surfaces of the booster seat.

4. Adjust headrest for proper shoulder belt fit.
   The shoulder belt **MUST** cross midway between the child’s shoulder and neck.

5. Secure child and booster seat to vehicle seat.
   Stretch the lap/shoulder belt across the child and fasten the buckle. Make certain the shoulder belt is threaded through the shoulder belt guide.

6. Check your work.
   Make sure the lap belt is stretched low and snug across the child’s hips, within the lower belt guides, and fastened into the buckle.

**WARNING**

The shoulder belt **MUST NOT** cross the child’s neck or fall off the child’s shoulder. If you cannot adjust the shoulder belt to properly lay midway between the child’s shoulder and neck **AND** at or above the shoulder, try another seating location or do not use the booster seat.

---

**Booster Installation Checklist**

1. **Convert child restraint to booster seat.**
   - See “Converting Seat into Booster Mode,” (p. 56)
   - Anti-rebound Bar has been removed for Booster use. (p. 28)

2. **Secure booster seat to the vehicle seat.**
   Make sure the seat base is level with ground (p. 52). Make sure the bottom and back of the booster seat are touching vehicle seat and back. **IMPORTANT:** You may use the Tether Strap and Lower Anchor Connectors to secure this booster seat to the vehicle seat as long as the position of the booster seat in the vehicle and/or the resulting fit of the vehicle seat belt over the child are not affected.

3. **Place the child in the booster seat.**
   - Make sure the booster seat is securely locked into Recline Position #5 (p. 58).
   - Make sure the child’s back and bottom are flat against the back and bottom surfaces of the booster seat.

4. **Adjust headrest for proper shoulder belt fit.**
   The shoulder belt **MUST** cross midway between the child’s shoulder and neck.

5. **Secure child and booster seat to vehicle seat.**
   Stretch the lap/shoulder belt across the child and fasten the buckle. Make certain the shoulder belt is threaded through the shoulder belt guide.

6. **Check your work.**
   Make sure the lap belt is stretched low and snug across the child’s hips, within the lower belt guides, and fastened into the buckle. The shoulder belt must cross the child midway between his/her shoulder and neck.
Converting Seat into Booster Mode

1. Loosen harness straps by pushing the harness release button on the front of the seat. At the same time, pull on the harness straps.
   Raise the headrest to highest position (p. 58).
   Unfasten the chest clip and buckle.

2. Remove the crotch buckle from the crotch slot. Recline the seat to **Recline Position 1** and turn the anchor and push it up through slot in the seat. Pull crotch buckle off seat.

3. Unfasten two snaps at the harness slot openings where the shoulder straps come out then unfasten snaps on the inside of the seating area. Pull the back pad forward.
   Push the shoulder straps behind the headrest pad.

4. Reassemble the loose crotch buckle onto the shoulder straps and fasten the chest clip.
   Flip the crotch buckle over the assembled chest clip.
   Push the fully assembled harness into the open compartment as shown.

5. Raise back pad and fasten the two snaps on side of seat pad then lower the headrest pad.
   Re-fasten the snaps at the shoulder strap openings.

6. Adjust booster seat to **Recline Position 5-ONLY** (p. 58).
   Booster Mode is complete.
   Reverse steps to convert back to Forward-facing harness mode.
**Adjusting the Headrest/Harness Position**

To adjust, squeeze the headrest adjust lever, as shown, while sliding the headrest up or down to the desired position. When the headrest is in one of the locking positions, the adjust lever will pop into its original position.

Note: You may need to loosen the harness straps to adjust the headrest (p. 62).

Rear-facing: Start with the headrest in its lowest position. Adjust headrest so the harness straps are **at or just below** the child’s shoulders.

Forward-facing: Start with the headrest in its highest position. Adjust headrest so the harness straps are **at or just above** the child’s shoulders.

**Reclining Child Restraint**

**REAR-FACING POSITIONS**

When the seat is reclined to **Recline Positions 1, 2 or 3** the ball must fall into the green zone as shown.

**FORWARD-FACING POSITIONS**

When the seat is placed into **Recline Positions 4 or 5**, the ball must fall into the blue zone as shown.

To reposition the crotch strap, first recline the seat to **Recline Position #1** (p. 58). Looking under the front of the seat, turn the crotch strap harness anchor sideways and push it through the slot in the bottom of the seat shell. Reposition the crotch strap into the other slot. Make certain the crotch strap is properly seated against the seat shell.

Note: The crotch strap should be snug against the child. Choose the slot that is closest to the child **AND** the most comfortable for the child but **NEVER** under the child’s bottom.

**For Newborn Position**

Place the anchor through the front slot, then feed it through the rear slot.

Make sure the anchor is completely through the rear slot and is lying flat against the bottom of the seat.

**IMPORTANT:** Do not use this configuration for infants weighing more than 4.5 kg (10 lbs).
Securing the Child in the Child Restraint

1. Place baby in the child restraint. The baby’s back and bottom should be flat against the restraint. If there is a gap, the baby will not be comfortable.

   - Push the harness release button on the front of the seat. At the same time, pull on the harness straps.

2. Unbuckle harness and unfasten chest clip (p. 62).

   - Place the child in the child restraint. Check the crotch strap position, see page 59 to change positions.
   - Bring each harness strap over the child’s shoulders.

3. Rear-facing: Start with the headrest in its lowest position. Adjust headrest so the harness straps are at or just below the child’s shoulders.

   - Forward-facing: Start with the headrest in its highest position. Adjust headrest so the harness straps are at or just above the child’s shoulders.

   - Note: The child’s head should be centered within the headrest foam.

4. Insert both buckle tongues into the buckle. Pull up on the harness strap to check that the buckle tongues are fastened and to remove any slack from the webbing around the child’s legs.

   - Snap the two halves of the chest clip together, as shown, and slide to armpit level.

5. Hold the chest clip while pulling the harness adjustment strap so that the chest clip does not ride up into the child’s neck. The harness straps must be snug against the child. A snug strap should not allow any slack. It lies in a relatively straight line without sagging. It does not press on the child’s flesh or push the child’s body into an unnatural position.

   - Check the harness straps near the shoulders for slack. You should NOT be able to pinch the harness (see illustration). Adjust as needed.
Removing the Child from the Child Restraint

Loosen the harness strap by pressing the harness release button located on the front of the seat. While pressing the button, pull out on the harness straps.

To unfasten the chest clip, push the release button and pull apart.

Press the red buckle release, and remove the buckle tongues.

Removing the Tether Strap

**WARNING!**

- To avoid a strangulation hazard, you **MUST** tightly roll or fold excess tether strap and secure with the strap/rubber band.
- Attach the tether hook to the storage clip on the seat when not in use (**rear-facing mode only**). This will keep an unused tether or tether hook from hitting someone during a crash.

1. Press the adjuster release button to loosen tether strap.

2. Press the tab and twist, then remove the hook from the anchor.

3. **TO STORE:** When the tether strap is not in use you **MUST** attach the hook to the back of the child restraint, slide excess strap behind the clip.
   - A loose tether strap and hook may injure your child.
   - To remove, see Step 2, above.
The Federal Aviation Administration (FAA) recommends that you secure your child for air travel in an appropriate child restraint based on your child’s weight and size. Turbulence can happen with little or no warning. When turbulence occurs, the safest place for your child is in a properly installed child restraint, not in an adult’s lap or on the aircraft seat with its seat belt. Keeping your child in a child restraint during the flight will help ensure your family arrives safely at your destination.

The FAA recommends that a child weighing:

- more than 18 kg (40 lbs) use an aircraft seat belt;
- less than 9 kg (20 lbs) use a rear-facing child restraint; and
- from 9 to 18 kg (20 to 40 lbs) use a forward-facing child restraint. This restraint CANNOT be used in booster mode in aircraft.

*Please note that these FAA recommendations may vary from those applicable to the use of your child restraint in a motor vehicle.*

**IMPORTANT:** Before installing the child restraint, make sure the aircraft seat is in a fully upright position.

1. Unbuckle the aircraft seat belts and lay over the armrests, as shown. Adjust the child restraint to its **Recline Position 1, 2 or 3** (p. 58), then place it on the aircraft seat **rear-facing**.

2. Pull the seat pad off the front of the child restraint. Route the aircraft seat belt through the rear-facing belt path opening on one side and continue through the belt path opening on the opposite side of the child restraint, as shown above. **IMPORTANT:** Make sure the aircraft seat belt is in front of the crotch strap, as shown.

3. Fasten the aircraft seat belt.

4. The aircraft seat belt must be as tight as possible. Route the excess seat belt strap back through the rear-facing belt path opening, as shown above. Using your full weight, push the child restraint firmly onto the aircraft seat while pulling on the excess seat belt strap to tighten.

**Check your work.** Reconnect the seat pad to the front of the child restraint. Try to move the child restraint in all directions. If you can move the restraint more than 2.5 cm (1 in.) side to side or front to back at the rear-facing belt path, the aircraft seat belt is not tight enough, and you **MUST** install again until the seat belt is tight.
Installing Child Restraint
Forward-facing in Aircraft

1. **IMPORTANT:** Before installing the child restraint, make sure the aircraft seat is in a fully upright position.

2. Adjust the child restraint to **Recline Position #5** (p. 58), then place it on the aircraft seat forward-facing.

   - Route the aircraft seat belt through the forward-facing belt path opening in the back of the child restraint and continue through the belt path opening on the opposite side of the child restraint.
   - **Note:** Lift the restraint’s back pad away for easier access.

3. Fasten the aircraft seat belt.

4. The aircraft seat belt must be as tight as possible. Route the excess aircraft seat belt strap back through the forward-facing belt path opening, as shown. Using your full weight, push the child restraint firmly onto the aircraft seat while pulling on the excess seat belt strap to tighten.

   - **Note:** Because of the fixed length of aircraft seat belts, the belt buckle could be behind the child’s back after tightening the belt. For your child’s comfort, Evenflo recommends cushioning the child’s back by placing a small pillow or folded-up blanket, or a folded-up jacket, over the belt buckle.

   - **Check your work.** Reconnect the seat pad to the child restraint. Try to move the child restraint in all directions. If you can move the restraint more than 2.5 cm (1 in.) side to side or front to back at the forward-facing belt path, the aircraft seat belt is not tight enough, and you **MUST** install again until the seat belt is tight.
**Removing the Seat Pad**

1. Raise headrest and unfasten the snaps on the fabric flap.

2. Remove elastic straps from around the vehicle belt guides.

3. Slide headrest pad over headrest and remove the elastic straps around the vehicle belt guides.

4. Unfasten two snaps at bottom of Headrest Pad.

5. Lift the head support flap up and unfasten the snap strap at bottom of head support pad.

6. Pull the strap out of the opening in the head support board.

7. To remove headrest pad, lower backrest flap and slide pocket off headrest.

**Removing the Seat Pad (cont.)**
Removing the Seat Pad (cont.)

8.
Unfasten snap, on each side of seat pad.

9.
Unfasten the 2 elastic loops on both sides of the seat as shown. Repeat on opposite side of the child restraint.

10.
Push buckle through opening in seat pad as shown.

11.
Remove the seat pad from the edge of seat pad as shown. Repeat on the other side of the seat.
Removing the Seat Pad (cont.)

12. Unclip tether from the tether anchor bar and push through slot in seat pad as shown.

13. Remove seat pad from headrest, as shown.

Note: To re-attach Seat Pad, reverse this process.

Care and Cleaning

- **DO NOT** lubricate or immerse in water the LATCH connectors, the buckle, or any other part of this child restraint, unless rinsing is permitted, as stated on the back of the buckle for your restraint.
- Plastic and metal parts may be wiped clean with mild soap and water and dried with a soft cloth. Do not use abrasive cleaners or solvents.
- Take care not to damage any labels.
- The harness can be wiped clean with mild soap and water. Allow harness to air dry.
- Machine wash the seat pad separately in cold water, delicate cycle. Tumble dry 10 to 15 minutes on low heat.
- **NEVER** use child restraint without the seat pad.
- To protect the child restraint from damage caused by weather, rodents, and other elements common to garages, the outdoors, and other storage locations, remove the seat pad and thoroughly clean the restraint and pad prior to storage. Take care to clean in the areas where crumbs and other debris tend to accumulate.

Tip! To help protect the vehicle upholstery, place a towel beneath and behind the child restraint.
For future reference, record the model number of your child restraint AND the date of manufacture below.

Model Number: ______________________

Date of Manufacture: ______________________

**Proper Disposal of this Child Restraint**

When this child restraint reaches the expiration date found on the date of manufacture label, Evenflo encourages you to dispose of it properly. Most components of this child restraint are recyclable.  
1. Remove all fabric and padding.  
2. Remove all screws and disassemble the restraint.  
3. Recycle all fabric, padding, plastic, foam and metal parts, if accepted by your local recycling center. Responsibly discard the rest.  
If your local recycling center won’t accept the padding, you may dispose of it in the landfill.

To prevent injury due to hidden damage, lost instructions, outdated technology, etc., discontinue use of this restraint after the expiration date on the label or if it has been involved in a crash.
For a period of 90 days from the original purchase of this Product, Evenflo warrants to the original end user ("Purchaser") this Product (including any accessories) against defects in material or workmanship. Evenflo’s sole obligation under this express limited warranty shall be, at Evenflo’s option, to repair or replace any Product that is determined to be defective by Evenflo and determined to be covered by this warranty.

Repair or replacement as provided under this warranty is the exclusive remedy of the Purchaser. Proof of purchase in the form of a receipted invoice or bill of sale evidencing that the Product is within the warranty period must be presented to obtain warranty service. This express limited warranty is extended by Evenflo ONLY to the original Purchaser of the Product and is not assignable or transferable to subsequent purchasers or end users of the Product. For warranty service, contact Evenflo’s ParentLink Consumer Resource Center at www.evenflo.com.

EXCEPT TO THE EXTENT PROHIBITED BY APPLICABLE LAW, ANY IMPLIED WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE ON THIS PRODUCT IS HEREBY DISCLAIMED. EVENFLO SHALL NOT BE LIABLE FOR ANY INCIDENTAL, CONSEQUENTIAL, SPECIAL OR PUNITIVE DAMAGES OF ANY KIND FOR BREACH OF THE EXPRESS LIMITED WARRANTY ON THIS PRODUCT, OR ANY WARRANTY IMPLIED BY OPERATION OF LAW. OTHER THAN THE EXPRESS LIMITED WARRANTY SET FORTH ABOVE, THERE ARE NO OTHER WARRANTIES THAT ACCOMPANY THIS PRODUCT AND ANY ORAL, WRITTEN OR ANY OTHER EXPRESS REPRESENTATION OF ANY KIND IS HEREBY DISCLAIMED.
